Установка msmtprc

```
sudo apt-get install msmtp-mta ca-certificates
sudo nano /etc/msmtprc
```

> defaults
>
> tls on
> tls_starttls on
> tls_certcheck off
> tls_trust_file /etc/ssl/certs/ca-certificates.crt
>
> account default
> host <smtp.example.net>
> port 465
> auth on
> keepbcc on
> user <username@example.net>
> password <password>
> from <username@example.net>
> syslog LOG_MAIL

```
sudo nano /etc/php/7.4/apache2/php.ini
```

> sendmail_path = /usr/bin/msmtp -t

```
echo "Test Mail." | msmtp -a default username@domain.com
```
