

Вариант 2

Поменять <SERVER>, <USER> и <PASSWORD> на свои значения FTP сервера

```
/system scheduler
add disabled=no interval=5d name=backup on-event=backup policy=\
ftp,reboot,read,write,policy,test,password,sniff,sensitive,romon \
start-date=jan/10/2020 start-time=00:00:01
/system script
add dont-require-permissions=no name=backup owner=su policy=\
ftp,reboot,read,write,policy,test,password,sniff,sensitive,romon source="\
log info \"backup starting\";\r\
\n:local CurrentTime [/system clock get time];\r\
\n:local CurrentDate [/system clock get date];\r\
\n:local Hour [:tostr [:pick \"$CurrentTime 0 2]];\r\
\n:local Min [:tostr [:pick \"$CurrentTime 3 5]];\r\
\n:local Day [:tostr [:pick \"$CurrentDate 4 6]];\r\
\n:local Month [:tostr [:pick \"$CurrentDate 0 3]];\r\
\n:local Year [:tostr [:pick \"$CurrentDate 7 [:len \"$CurrentDate]]];\r\
\n:global name=backupfile value=([/system identity get name] .\"__ $Day_ $ \
Month_ $Year__ $Hour_ $Min.backup\")\r\
\n:global name=scriptfile value=([/system identity get name] .\"__ $Day_ $ \
Month_ $Year__ $Hour_ $Min.rsc\")\r\
\n/system backup save name=$backupfile;\r\
\n/export verbose file=$scriptfile;\r\
\n:delay 10s\r\
\n/tool fetch address=<SERVER> src-path=$backupfile user=<USER>\
r mode=ftp password=<PASSWORD> dst-path=\"backup/$backupfil\
e\" upload=yes;\r\
\n/tool fetch address=<SERVER> src-path=$scriptfile user=<USER>\
r mode=ftp password=<PASSWORD> dst-path=\"backup/$scriptfil\
e\" upload=yes;\r\
\n:delay 20s\r\
\n/file remove $backupfile;\r\
\n/file remove $scriptfile;\r\
\n/log info \"backup finished\";\r\
\n"
```
